DETAILED ACTION

1. Applicant's election without traverse of Group I (claims 1-12, 17 and 18) in the reply filed on December 14, 2005 is acknowledged. Thus claims 13-16 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 4-6, 10-12, 17 and 18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The terms "lowest setting" and "highest setting" in claims 4, are relative terms which render the claim indefinite. The terms "lowest setting" and "highest setting" are not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. Thus the term "intermediate setting" also renders the claim indefinite.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2874

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-12, 17 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Miyazaki (U.S. Patent 6,690,865 B2, as best understood by the Examiner).

Miyazaki discloses the claimed method of aligning an optical fiber and a laser diode comprising the steps of designating an alignment data point (reference position); designating four vertex alignment points disposed around the center alignment point in a substantially diamond planar configuration (see Fig. 4) providing five measures of alignment quality; determining a greatest measure of alignment quality among the five measures of alignment quality and designating the respective alignment point as a new center alignment point by comparing optical power of each position (see column 12 lines 56-60 and column 14 lines 1-35); changing the scan resolutions (see step 102 in Fig. 6, step 201 and step 205 in Fig. 7) and threshold to different settings to find the optimum position (see Figs. 3A, 3B, 3C, 4, 6, 7, 8).

Conclusion

6. The prior art documents submitted by applicant have been considered and made of record (note the attached copy of form PTO-1449).

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tan (U.S. Patent 5,029,965), Abbott (U.S. Patent 6,811,320 B1)

Art Unit: 2874

AND Ramsey (U.S. Patent 6,435,735 B1) teach aligning an optical fiber to an optical component.
